

Durable Polyester Labels

The 708WP label material and type181 ribbon combination has been tested and proven to be durable even in the harshest environments and extremely durable in chemical testing. Printing is done by Thermal Transfer technology and does not come off in the harshest of chemical environments, including:

IPA, MEK, EnSoIve, Abzol, Feron141 b, Zestron cleaning fluids, Vigon cleaning fluids, Kyzen cleaning fluids, Toluene, Xylene and more.

These labels are available in both white and metallic silver in any size, shape or amount needed. The printing can include text, graphics, barcode (1D or 2D) and logos.

These labels are suitable for the following uses:

- Marking stencils for solder paste - enabling tracking them to the production line in order to know how many times they were used, difficulties in use and any other information needed.
- Marking circuit boards that go through cleaning after soldering.
- Marking machinery that is used in harsh environments.
- And any other of your harsh environment's identification needs.
